

# IRON MAN iron FE

Have you ever met IRON MAN? He has been around since cave men times but no one has ever met him. He came from the Latin word ferrum. No one knows who discovered him. No one knows when or where. It is a mystery.

He is super strong because he can withstand a nuclear blast. His enemy is rust. He used to protect people during World War I and II. He lives in Europe. He looks like a man in iron armor but he is all metal. His atomic number is 26 so is the number of his protons, electrons and neutrons.

He lives in the Earth's crust. He is friends with gold and silver. I admire him because he is the strongest of his friends.
