

Moon Phases Activity
Celeste Branciforte

Did you know about the moon different phases of the moon? Well if you don't then I will tell you. The first phase of the moon is the new moon. The new moon is between the sun and the earth. Also the new moon you can't see light of the moon. The second one is the crescent moon. The light begins to show. The moon is waxing, meanings the part of you see is growing larger. I also forgot to tell you there is eight phases of the moon. The third moon is the first quarter moon. The. Third moon shows a first quarter of the moon. The fourth quarter is the gibbous moon. The gibbous moon shows an almost full moon. The fifth moon is the full moon. The full moon is you can see all of the light of the moon. The sixth moon is the gibbous moon the gibbous moon is to waning to be smaller. Seventh moon is the last quarter moon and it is three-quarters of the way around the earth. The last moon is the crescent moon and it is almost full. Those are the moon phases.

Have you ever did a project about the moon phases with Oreos? Because if you didn't I will explain. Fist what materials you need is a plastic knife and Oreos. Next you do the phases. Then your done your phases and now you can eat them!
