

SUPER POTASSIUM MAN

By: Kate Delaney

- It has 19 protons, 20 neutrons, and 19 electrons
- The atomic number is 19
- The atomic mass is 39.0983

Insert the superhero picture that you drew. We'll do this together.

Insert a QR Code that links to a website that gives more information about your element.

- Discovered in 1807 by Sir Walter Hmpfrey
- The orgin name is potash
- It is in glass, soap, and bananas

- It impacts the body muscles, mental alertness, and storage of energy
- Potassium is in important compounds

Since it has properties of glass it can make a glass forcefield around it. Also when it is being chased by villains it can combine with something since it is a good compound.. Bananas are made of me so I can turn into one whenever I want.. I can also turn into salt.. Potassium is a good conductor, so it can get all hot and burn the villains. Potassium is very soft so it can fit threw tight places. Also it can bend around the villains and capture them. Potassium is a very good superhero and has a lot of cool things that it can do.
