Electrons:79
Electron shells:18

Insert the superhero picture that you drew. We'll do this together.

The Characteristics of gold
Its density is 19.3
The melting point is 1064.18c
Boiling point is 2856c

The important uses of gold is it is the
Coveted metal it can also be a good conductor for elec-
tricity but doesn't tarnish

The Story of golden women

My superhero's ability is to freeze you into golden statue then melt the gold and you will be in prison. Her weakness is a element called helium if you fill a room with helium in it and put her in the room all her powers will disappear into thin air. She got this power from when she was a child in 1996 she was playing with her baby sister but while she wasn't looking her sister went into their father's lab so when she turns and sees her baby sister being gone so she looks in the basement but a strange machine was there the baby turned it on she than sat in front of it so golden women when she was younger she jumped in front of the ray and got shot with a golden beam
