

Moon phases Activity

By: Michelle Shih

My Oreo activity

Do you know the eight Moon phases? Well, let me tell you about it. First it's the New Moon, a Moon you can't see. Next, is the Waxing Crescent Moon, the Moon you only see a small bit on the right. Then, it's the First Quarter Moon(half moon),when you see half of the Moon. After that is the Waxing Gibbous Moon, when the Moon is almost full. Finally, it's the Full Moon, when you can see all of the Moon. Lastly it goes backwards, Waning Gibbous, Last Quarter(half), Waning Crescent, and back to a New Moon. Waxing means developing and Waning means shrinking. So that's the eight Moon phases

and the meaning Waxing and Waning, but if it's night now, look at the Moon and ask yourself,"what moon is it tonight?"

Do you want to know a tasty way of learning Moon phases? Well, first you need 5-6 Oreos, a knife, and to know your Moon phases. First, you split the Oreos in half with cream on one side and none on the other. The one with no cream can be the New Moon and the one with cream can be the Full Moon. You use the knife to make the rest. I loved this way and think you would like it too!
