

Neon Blast

By: Sam Zak

History

In 1898 William Ramsey and Morris Travers at the college London isolated krypton gas by evaporating liquid Argon to make Neon.

Abilities

- **Night vision**
- **Can Shoot lasers**

Characteristics

- **Neon is not toxic**
- **Colorless under normal conditions, it glows a reddish orange**

Important uses

- **Help see in the dark**
- **Neon is used to make high voltage indications, switching gear, lighting arrests, diving equipment.**

Neon Blast

Neon Blast started of as a regular scientist, but on night he was doing an experiment with Neon. 1 hour later he placed the wrong chemical and everything turned to gas. The doors were closed so the scientist couldn't breath and passed out. Then he woke up and felt normal but he wasn't inside his body was a non toxic chemical that makes him have night vision and can shoot lasers. That night he was robbed , and out of no where the lights turn off and the robber can't see and the only person who can is the scientist. Then the scientist takes the robber out and calls the police about the robbery. After the robbery he got con fused about how he can see in the dark. Then when he got home he blinked and shot his door down with a laser. When he woke up he thought of a cool superhot name called **NEON BLAST!!!!!!!!!!!!** Now every night when something goes wrong Neon blast will be there.
