

Moon Phases Activity

By: Ally Kuklis

Have you ever wondered about the Moon's phases? I have! There are eight phases of the Moon, the new moon is when we can't see anything. Next, is a waxing crescent Moon, that is when you can start to see a small part of the moon. (Waxing means to get larger.) After that, is the First Quarter moon it is when you can almost see have the moon. Then, there's the Gibbous Moon that's when you can see 3 quarters a way. Finally, there's the full moon that's when you can see the moon clearly. But that's not the last moon. Next is the waning Gibbous when it begins to become smaller. Then, there's the Last Quarter moon when you can see only a small amount. Last, there is tiny little sliver of the Moon left called the waning crescents, and then it starts again!!!

Before, I knew about the moon phases I needed something to help me? Oreos! I need Oreos and a plastic knife. After, I have the materials I start making the phases. When I finished I took a picture like you can see. Then, I enjoyed my Oreos. I loved this fun project.
