

Promethium Man

By: Cassidy Golin

History

Promethium or chemical symbol Pm61 was predicted by Bohuslav Brauner a Czech chemist in 1902. Brauner found it while analyzing the byproducts of uranium fission.

Basic facts...

#Protons: 61

#Neutrons:84

#Electrons:61

#Electron shells:6

Characteristics

Promethium is a very radioactive element.

Its color is silvery white.

In the dark promethium starts to glow a pale blue or green due to its radioactivity.

Important Uses:

Promethium is used to make batteries for space craft and guided missiles.

It is also used as a light source for signals.

In the future it might even be used for portable x-rays.

Superpowers

Promethium man is made from Pm61 so he can blow up stuff.

Its ok if it is dark because he will start to glow a pale blue or green. He can adapt to almost any setting because he was born in the earths crust. Since Pm61 is a solid he has amazing super strength. Promethium man is able to breath in space. Promethium man is an amazing superhero even if he's just an element.
